Powerful Solutions for Project-Driven Organizations

by Microsoft

Too often, project-driven organizations are faced with a difficult choice: they can choose best-of-breed business applications and integrate them at great cost, or choose a fully integrated solution that lacks functional... [read more](#)

Compliance Multitasking—Today's Security Priority

by Secure Computing Corporation

There's probably no more important task facing today's enterprises than complying with regulations and protecting sensitive data. Obviously, there's the usual financial headache of running business on a budget. But the task... [read more](#)

Synchronizing Real-time Product Movement to Improve Distribution Operation Productivity

by Microsoft

Wholesale distribution operations are becoming more complex, with ever-changing customer requirements, global and electronic marketplaces, multiple distribution channels, and compliance initiatives adding to the perennial... [read more](#)

Realizing "Scale Without Fail" for a Large-scale, High-volume Telecommunications Application

by Appistry (*Case study*)

A global telecommunications provider was mired in a hardware-centric, multilayered architecture for its data-intensive and time-sensitive network applications. Even with its sizeable computing infrastructure investment, it... [read more](#)

Accelerating SAP Deployments

by Worksoft

A crucial advantage of the SAP architecture is that configuration changes can be made easily—the downside being its tightly integrated nature, which increases the risk of unintended consequences. That means time to market is... [read more](#)

Top Ten Considerations for Choosing a Server Virtualization Technology

by SWsoft

The playing field for server virtualization has become much more crowded over the last few years. It can be very time-consuming to digest each vendor's marketing materials to find the right solution for your organization.... [read more](#)
